Foam Dressing

Adhesive and Non-Adhesive Foams are used as a primary or secondary dressing for wounds with moderate to heavy exudate. Highly absorbent central hydrocellular foam layer effectively absorbs wound drainage. Helps maintain a moist healing environment at the wound surface.

Skin-friendly acrylic adhesive helps ensure that the dressing remains secure. Waterproof and breathable outer layer protects the wound from outside contamination and prevents strike-through of exudate/drainage. Soft and cushioning to help provide better comfort and protection.

Indications: Wounds with moderate to heavy exudate.

Contraindications: Patients with a known hypersensitivity to the product itself or to its components.

Change Frequency: Change dressing as directed by a healthcare professional
